Scrap box with folding bottom

Our scrap boxes are used to collect scrap metal sheets, scrap pieces, stamped waste, or other waste. The scrap box can be individually designed and manufactured based on the installation situation and the dimensions available.

In addition, we have developed a simple and inexpensive scrap box that opens and closes the bottom of the scrap box with a swiveling movement thanks to the movable runners of the forklift. This allows the scrap to fall down into a collecting container.

An additional manually swiveling bracket locks the scrap box so that the bottom of the scrap box cannot open during transport by the forklift.

We offer the scrap box in 3 different sizes:

Size	Length	Width	Height	Payload max.
A	1600 mm	900 mm	600 mm	2,0 tons
B	1100 mm	750 mm	600 mm	1,5 tons
C	600 mm	600 mm	600 mm	1,0 tons

For further information we stay at your disposal.
